DETAILED ACTION

Allowable Subject Matter

1. Claims are 1-22, 24-30, 32-47, 72-75, 77-80, 82-84 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, prior art teaches all limitations of the claim except an aggregation module coupled to the plurality of ingress data ports and configured to receive the plurality of input data streams from the first processors using the plurality of ingress data ports, wherein an input data stream from a first processor is received via the ingress data port coupled to the first processor, the aggregation module adapted to analyze and combine the plurality of input data streams into one aggregated data stream in response to the at least one priority factor and to generate a packet descriptor comprising a reference to a memory location of its analyzed data packet; the memory comprising a plurality of priority queues each provided for a corresponding priority class, adapted to store the packet descriptor of each of the analyzed data packets classified to the corresponding priority class, the packet descriptor containing a reference to the memory location of its analyzed data packet in the memory.

Regarding claim 20, prior art teaches all limitations of the claim except a packet analyzer adapted to classify each of the ingress data packets into one of predetermined priority classes based on the at least one priority factor; a queue module comprising a plurality of priority queues each provided for the corresponding priority class, adapted to store a packet descriptor of each of the analyzed data packets classified to the corresponding priority class, the packet descriptor containing a reference to a memory

location of its analyzed data packet in the memory, and a selection logic implementing a queue scheme, adapted to arbitrate and select a packet descriptor from among the priority queues; a read interface coupled to the queue module, adapted to read a data packet corresponding to the selected packet descriptor from the memory; and an output module to send the data packets read from the memory to the second data link as the aggregated data stream.

Regarding claim 32, prior art teaches all limitations of the claim except generating a packet descriptor for the analyzed ingress data packet, the packet descriptor containing a reference to a memory location of its analyzed data packet stored in the memory; placing the packet descriptor in a priority queue corresponding to the priority class of the data packet; arbitrating and selecting a packet descriptor from among the priority queues using selection logic implementing a queue scheme; reading a data packet corresponding to the selected packet descriptor from the memory.

Regarding claims 46, 47, 75 and 80, prior teaches all limitations of the claim except generating a packet descriptor for the analyzed ingress data packet, the packet descriptor containing a reference to a memory location of its analyzed data packet stored in a memory.

This taken with all other limitations of dependent claims is considered novel and non-obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
